

LARGE FILE STORAGE + PLACES

- ① HOW TO STORE REALLY LARGE FILES?
- ② HOW TO FIND NEAREST NEIGHBORS?

HDFS → Hadoop Distributed File System

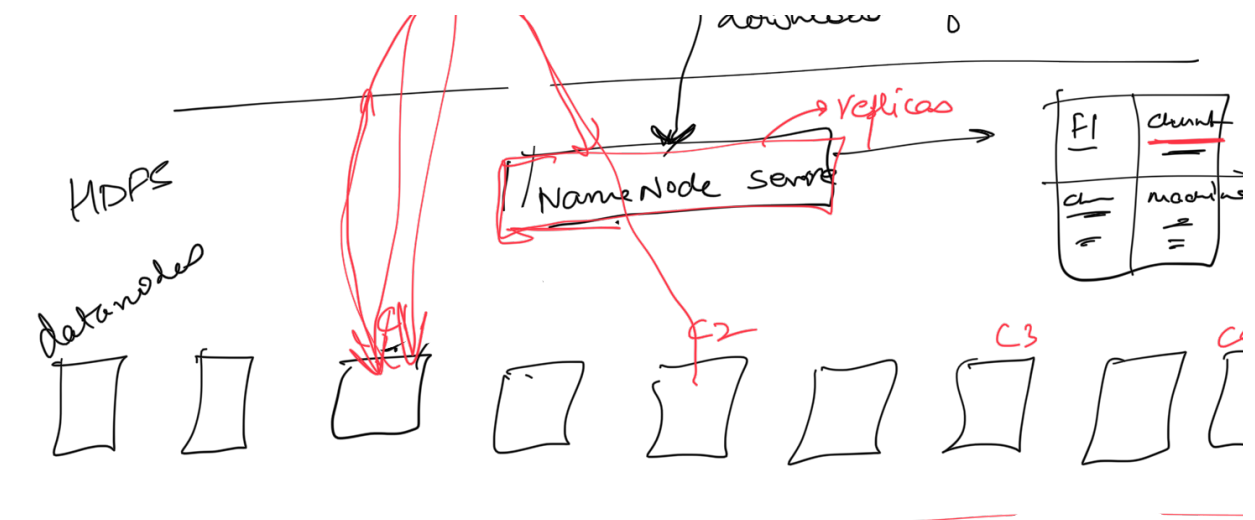

FI \rightarrow chunk
 \rightarrow chunk \rightarrow machine mapping

Namenode does not require sharding
 Datacentre
 25 PB
 128 MB

$$\frac{25 \times 10^3 \text{ MB}}{100 \text{ MB}} \approx \frac{2 \times 10^8}{100} \downarrow \boxed{0.2 \text{ GB}}$$

$$\frac{25 \text{ PB}}{128 \text{ MB}} = \frac{25 \times 10^6 \text{ GB}}{128 \text{ MB}} \downarrow 25 \times 10^9 \text{ MB}$$

PLACES

① Nearest X restaurants/hotels/businesses.

② Places that are less than X kms away.

① (lat, long)

SELECT * FROM restaurants

where latitude > lat-1 AND longitude > lon-1

or

latitude < lat+1 AND longitude < lon+1

2 million

1.
