

Will start at 9:10PM

Finish Git

Git Remotes

① History

② Team Work

multiple dev  
may be working  
on diff things in  
the same project at  
one time

→ each of them on their  
own device

Git Repository Hostings  
websites

(Github | Gitlab | Bitbucket)

Common place

⇒ all the code  
where other  
developers can  
download/  
upload ↕

- common place could be one of the dev's laptop as well.
- but not possible to easily download from other's laptop
- common place should be something people can easily download from

Naman

=

Independent

- ① Complete read only copy of that code base.
- ② of default branch it will create another copy

Git Remote : Remote URL where you download Code from.

⇒ Read only copy is nothing but a demonstration of how the code on remote looked like when you cloned.

GITHUB

CLONED

(1)

(2)

Read ONLY  
State

remotes / — / branches

both head  
and work

① git checkout remotes / — / —

② git checkout -b local-branch -

Changes in local  $\Rightarrow$  remote

git fetch  $\Rightarrow$  Hey Git

Please bring all changes that have happened in remote to my read only copy of the remote as well.

# GITHUB

Way 1 :

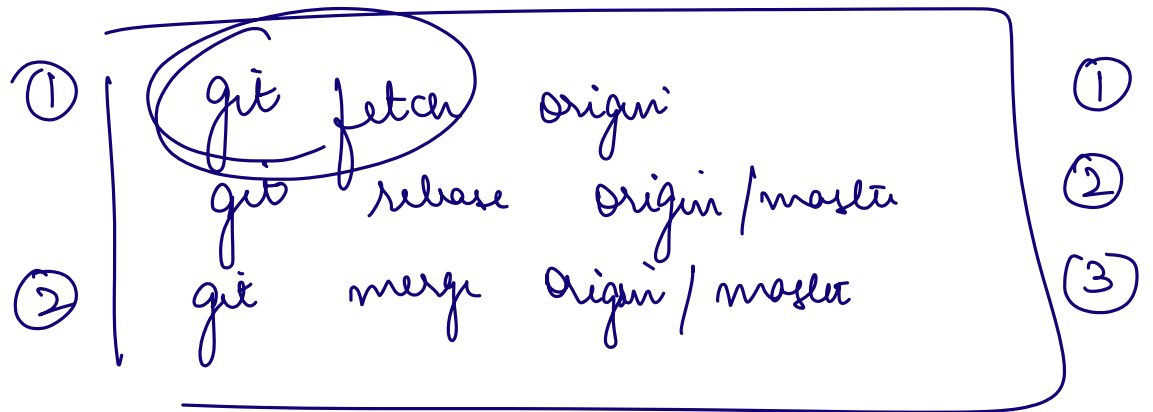

`git fetch + git merge`  
||  
`git pull`

V/S

Commit history will  
become weird-

# WORKING ON GITHUB (How to contribute to a code on git)

- ① By default you don't have access to Github repo owned by others.  
⇒ only read access.

H/W

- ① Complete using git branching
- ② Create your PR

No classes from 24th Dec → 1st Jan

Next class: Spring Boot

- ① Install IntelliJ Ultimate
- ② Install Java 17
- ③ ~~Watch all git classes~~

(Not a priority)

Atleast watch 1st class.
